[< Previous](#)[Next >](#)

## HTML Global Attributes

The global attributes are attributes that can be used with all HTML elements.

| Attribute                              | Description                                                                          |
|----------------------------------------|--------------------------------------------------------------------------------------|
| <u><a href="#">accesskey</a></u>       | Specifies a shortcut key to activate/focus an element                                |
| <u><a href="#">class</a></u>           | Specifies one or more classnames for an element (refers to a class in a style sheet) |
| <u><a href="#">contenteditable</a></u> | Specifies whether the content of an element is editable or not                       |
| <u><a href="#">data-*</a></u>          | Used to store custom data private to the page or application                         |
| <u><a href="#">dir</a></u>             | Specifies the text direction for the content in an element                           |
| <u><a href="#">draggable</a></u>       | Specifies whether an element is draggable or not                                     |

|                   |                                                                                  |
|-------------------|----------------------------------------------------------------------------------|
| <u>inputmode</u>  | Specifies the mode of a virtual keyboard                                         |
| <u>lang</u>       | Specifies the language of the element's content                                  |
| <u>popover</u>    | Specifies a popover element                                                      |
| <u>spellcheck</u> | Specifies whether the element is to have its spelling and grammar checked or not |
| <u>style</u>      | Specifies an inline CSS style for an element                                     |
| <u>tabindex</u>   | Specifies the tabbing order of an element                                        |
| <u>title</u>      | Specifies extra information about an element                                     |
| <u>translate</u>  | Specifies whether the content of an element should be translated or not          |
